

Boost Productivity and Success in Education – with ActivTrak

ActivTrak for Educational Institutions

Educators need insights into how individuals work and learn to spark healthy habits for better focus, higher productivity and greater well-being – whether that happens at home, at school or in the office.

ActivTrak's insights into digital work activity increase school administrators' understanding of how staff and students work in remote, on-site or hybrid settings. They also help educators quickly identify opportunities to improve work efficiency, reduce distractions, streamline technology and ensure security and compliance.

Productivity & Well-Being

Get a quick, at-a-glance summary of performance and productivity trends while proactively addressing deviations that signal issues with workload, technology or engagement. Give individuals access to their personal productivity metrics for transparency and accountability.

Workload Management

See how much time students spend in learning apps and sites, assess productive and focused time (and compare with healthy ranges), and ensure balanced workloads. Gain insights into working styles and process efficiency to facilitate proactive intervention and guidance.

Insights vs. Oversight

Assess productivity and wellness with teachers, administrators, parents and students in mind. Measure work habits without intrusive keystroke logging, email monitoring, camera access or video recording to ensure privacy and security compliance.

Data Security

ActivTrak data is encrypted and stored in a secure data center hosted by Google Cloud Platform (GCP). We also ensure your data is completely secure by implementing high-level security features like: password protection, HTTPS encryption, remote storage database, backup database and nightly database updates.

Privacy & Compliance

Exclude sensitive data and non work-related activity to ensure privacy. Restrict distracting, malicious and inappropriate content with website and application blocking. Enforce policy compliance with notifications of potential violations.

Funding

Leverage data insights to estimate funding requirements. Combine workload and productivity data to identify gaps in technology resources or staffing and training requirements.
